## STUDIES AND REPORTS

The Informing a Data Revolution project has produced a number of reports and studies to further our understanding of the problems facing national statistical systems and how to increase both capacity and resources for statistics. These include a series of discussion papers, a study of statistical systems in 27 countries and a series of in-depth studies in 7 countries.

[Access the Discussion Paper Series](#)

The **discussion paper series** features expert authors ranging from statisticians to academics with unique perspectives on statistical capacity development.

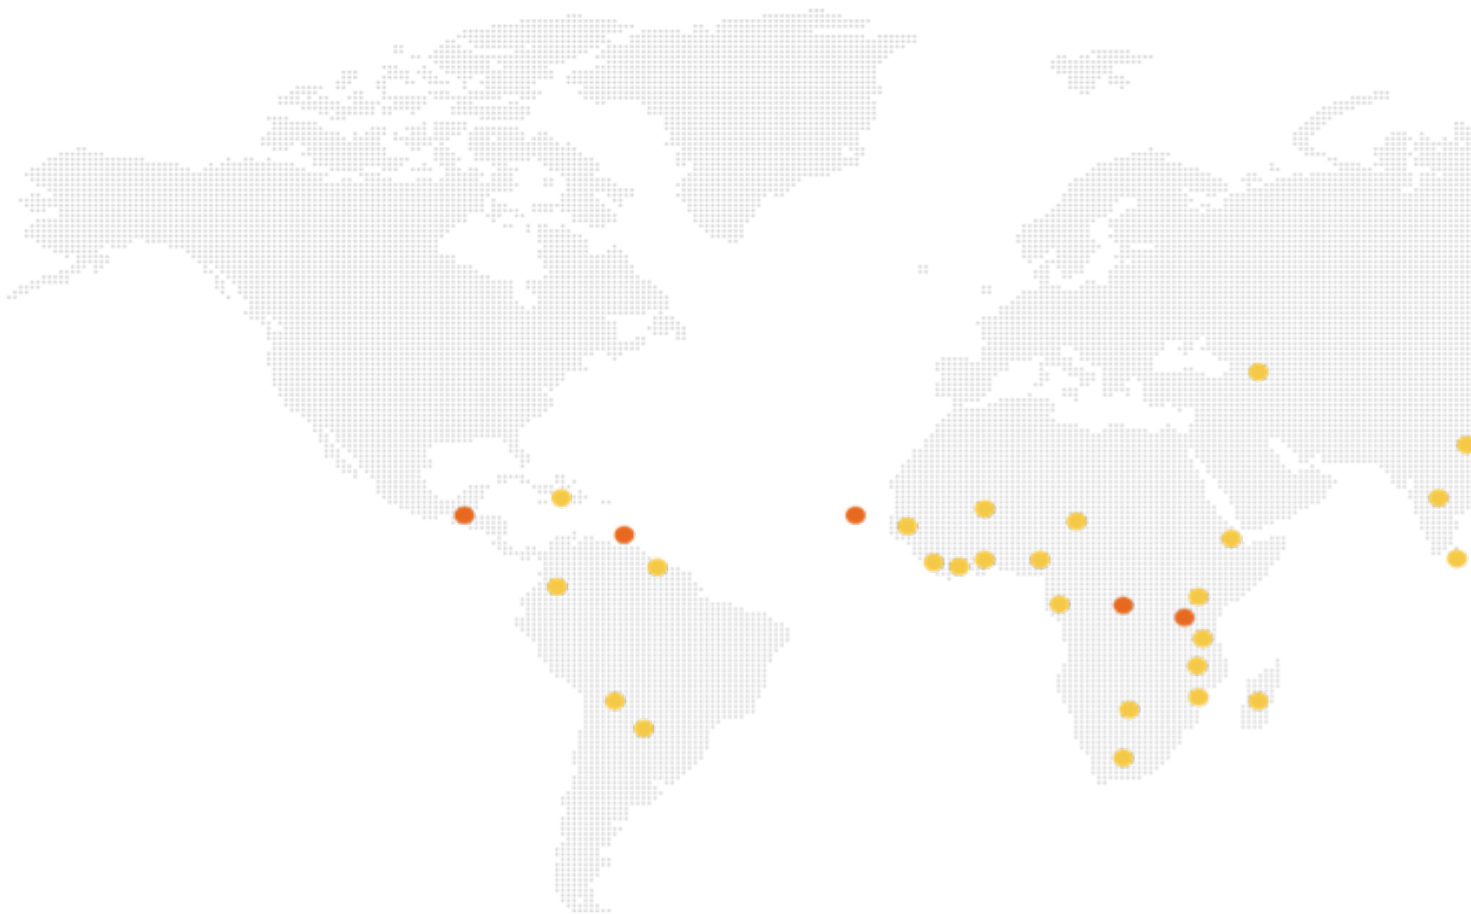

### Cross-Country Studies

**Country studies** were carried out in three stages between May and September 2014. In Stage 1, a comprehensive database was compiled to include information on the structure, activities and outputs of statistical systems in all developing countries. Once compiled, national statistical systems were divided into a small number of distinct groups with similar characteristics. Stage 2 involved a desk-study assessment of a sample of countries from each of the groups, involving 29 countries in total. Stage 3 involved in-depth investigation and analysis in seven countries, selected from each of the groups identified in Stage 1.

### **In-depth studies:**

- [Philippines](#)
- [Cape Verde](#)
- [DR Congo](#)
- [Bangladesh](#)
- [Burundi](#)

- Colombia
- Trinidad and Tobago

**Cross-country studies** (yellow): *Bangladesh, Bolivia, Botswana, Burundi, Cabo Verde, Colombia, Cambodia, Costa Rica, DR Congo, Dominican Republic, Gabon, Ghana, Malawi, Mali, Mexico, Mozambique, Nepal, Nigeria, Pakistan, Philippines, Senegal, South Africa, Trinidad & Tobago, Uganda, Viet Nam.*

**In-depth studies** (orange): *Bangladesh, Burundi, Cabo Verde, Democratic Republic of Congo, Colombia, Philippines, Trinidad and Tobago.*

The results of the country studies and the discussion papers, together with other components of the project, fed directly into the [Informing a Data Revolution Road Map](#).
