PARIS21 has compiled a Metabase, informational tool and data directory on the organisation, management and performance of national statistical systems. Users can generate a country profile that displays a set of metadata relating to statistical capacity across six dimensions:

- **Access**: The public availability of data is the foundation of a better-informed society.
- **Innovations**: Innovations offer solutions for today’s problems and inform tomorrow’s standards.
- **Timeliness**: Timely data helps decision makers react quickly and stay informed.
- **Soundness**: Sound methodology builds trust in data and ensures transparency.
- **Institutions**: A healthy institutional environment is a catalyst for statistical development.
- **Use**: Knowledge on the demand for data improves efficiency in data production.

The Metabase serves as both a baseline and a means of monitoring a country’s progress over time.
