User video guide to the Innovations and Metabase

Informing a Data Revolution (IDR) is a PARIS21 project working with national statistical systems to produce better data for better development. Financed by a grant from the Bill and Melinda Gates Foundation, the project consists of several interrelated components, including the compilation of two databases for data producers and users, as well as for the broader international data for development community.

- ? IDR Innovations Inventory: An inventory of case studies to identify and explore solutions that can fill data gaps, reduce costs and improve efficiency so that more and better data effectively contribute to improving people's lives.
- ? IDR Metabase: A compilation of data on the organisation, management and performance in statistical capacity to provide new insights for a data revolution.

This video will guide you on how to use these tools:

47 days to Cartagena - [follow the Countdown](#)
